

Don't be afraid! Scareware, malware, email threats are now history

If you don't have a complete network security solution, you're leaving your business network wide open to the enemy. Prevent attacks from destructive spam, viruses, worms, with McAfee® SaaS Email.

- Works at the network perimeter to protect the company, employees and network assets from spyware, viruses and phishing attacks
- Allows greater management control over unauthorized, unproductive workplace Internet usage with group policies and content control
- Activation starts with a simple MX record redirection and then you fine-tune the system to your specifications through our intuitive web-based Control Console
- SaaS is easy to justify as an operational expense
- Integrating these SaaS solutions eliminates the need to hire additional IT staff

With the following McAfee SaaS Email solutions, you can start fighting back today:

- **McAfee SaaS Email Protection**
Protect against inbound threats and prevent potentially damaging outbound emails
- **McAfee SaaS Email Protection and Continuity**
Keep your employees connected and productive without the threat of malware-laden email

For an even more economical and comprehensive defense, these solutions are also available in Security Suites.
